

STEELGUARD DOMESTIC SHUTTERS

Steel strength for your home garage

At Britannia, we have brought together the strength of a commercial steel shutter and the neat, compact look of a domestic roller garage door. SteelGuard is designed to complement the home while providing a stronger physical barrier than a typical lightweight aluminium curtain.

SteelGuard specification

- 73 mm interlocking 22 SWG steel laths
- UKCE marked
- Nylon endlocks to each section
- Approx. 300-330 mm headroom, size dependent
- Plastisol / powder-coated outer surface
- Key switch or rocker standard; remote unit + 2 handsets optional
- Anti-fall brake fitted as standard
- Internal manual override for power loss

Why choose SteelGuard vs aluminium garage doors?

- Commercial-level security with a domestic aesthetic
- Cost-effective repairs and low maintenance
- Wind class rating of 5 up to 6 metres
